

1. A method for completing a print job, comprising:
 - delivering at least one print job to a printing device;
 - bringing a tag containing information regarding the print job into close proximity to the printing device so that the device receives the information from the tag;
 - using the information received from the tag to complete the print job.
2. The method of **claim 1**, wherein the information received from the tag includes printing preferences of the user.
3. The method of **claim 1**, wherein the information received from the tag is a related print job.
4. The method of **claim 1**, wherein the information received from the tag is necessary to complete the print job.
5. The method of **claim 1**, wherein the print job is delivered in an encrypted form, and
 - wherein the tag contains a decryption key so that the job may be printed.
6. The method of **claim 1**, wherein the tag is part of a cellular telephone.
7. The method of **claim 1**, wherein the tag is part of a personal digital assistant.
8. The method of **claim 1**, wherein scanning a tag includes
 - sending a signal to the tag, and
 - receiving a signal containing information about the tag from the tag.

9. The method of **claim 8**, wherein the signal is a radio frequency signal.

10. The method of **claim 8**, wherein the signal is an infrared signal.

11. The method of **claim 1**, wherein the device includes a scanner.

12. The method of **claim 8**, wherein the scanner is used to scan the tag.

13. The method of **claim 1**, wherein the tag contains a bar code.

14. The method of **claim 1**, wherein the tag contains glyphs.

15. A method for transferring documents from one location to another, comprising:

sending at least one document to be transferred to the queue of a device having document transmission capabilities;

bringing an electronic tag containing in close proximity to a tag reader operably connected to the device having document transmission capabilities so that the tag may be read and information is received by the device;

using the information received from the tag to complete the document transmission.

16. The method of **claim 15**, wherein the information received by the device includes at least one fax number to which the job is to be sent.

17. The method of **claim 15**, wherein the information received by the device includes at least one email address to which the job is to be sent.

18. A system for generating an advertisement, comprising:
 - a tag encoded with advertising information;
 - a tag reading device for reading the tag and receiving the advertising information therefrom;
 - an output device operably connected to the tag reading device, wherein the output device generates the advertisement.
19. The system of **claim 18**, wherein the output device includes a printing device.
20. The system of **claim 18**, wherein the output device includes a facsimile device.
21. The system of **claim 18**, wherein the output device is connected to the Internet.
22. The system of **claim 18**, wherein the tag is included in one of a broach, a tie clip, a pen, and a container.
